

# PC Import Tools Suite by Olympic Systems

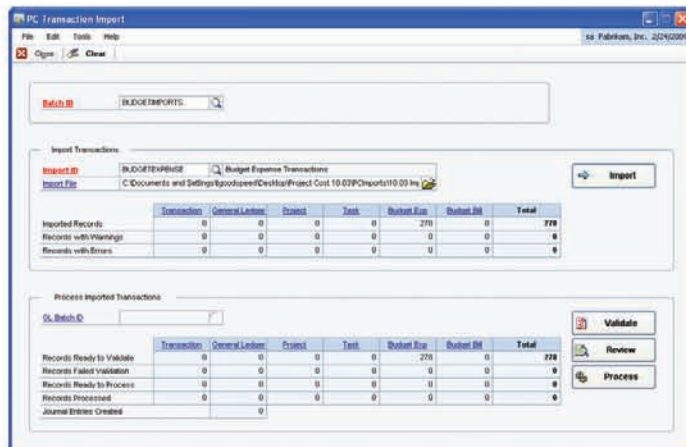

Olympic Project Cost Import Tools Suite permits users to integrate business transactions from almost any platform data source directly into Microsoft Dynamics™ GP.

Setup is easy as 1, 2, 3.

1. Setup Import ID
2. Map Import Data
3. Define Translations (if needed)

The import procedure is a two step process. First transactions are validated, translated and inserted into a staging table from where any errors may be corrected. Then the import procedure will process all valid records and build the appropriate Project Cost transactions. Again, any records that have errors may be corrected and reprocessed.

## Microsoft Dynamics™ GP

- **Imports:**
  - Project Setup
  - Task Setup
  - Project Budgets
  - Beginning Balances
  - Historical Project Activity
  - External Payroll Data
  - Time Clock Data
  - Project Allocations
  - Labor & SubContract Data
  - Employee Expenses
  - Accounts Payable Invoices
  - General Ledger Data
  - Sales Order Transactions
- **Import Directly into Microsoft Dynamics GP**
  - To General Ledger Batch
  - To Project Cost Transactions
- **Import from MS Project**
  - Flexible import tools provide easy links with tools such as Microsoft Project.
- **Fast & Easy Integration**
  - Easily map from any data source to fields within Project Cost using comma or tab-delimited text files.
  - Copy Existing Import Mappings to Create New Integrations.
- **Flexible Data Translation**
  - Translation Tools Allows User to Create a Custom Configuration for Any Import. Set Default Values or Make a List of Values to be Translated.
